AMBULANCE TYPES

TYPE I

Type I ambulances are built with a truck-style cab that provides ease of maintenance.

TYPE II

Road Type II emergency vehicles are easier to maneuver, thanks to a smaller size that increases your fleet's fuel efficiency with only a 9,500-lb gross vehicle weight rating.

TYPE III

Built in an ISO certified factory, these ambulances benefit from more than four decades of knowledge, as well as REV Group's expansive support and engineering expertise.

MEDIUM-DUTY

Featuring a roomy action area makes on-the-move patient care easier thanks to ample interior cabinets and exterior aluminum compartments.

UNIVERSAL APPEAL

For more than 40 years, McCoy Miller has built ambulances fit for every emergency situation. This full-fleet lineup, now with REV backing, is extremely versatile with sizes ranging from a unique 142 model to a sturdy 172 ambulance. Headroom ranges from 66 to 74.

McCoy Miller ambulances include features like, J-molding, drip rails, TriMark handles and full-height, stainless-steel door panels. Manufactured in Winter Park, Florida, the factory is ISO certified to ensure each ambulance meets or exceeds industry standards.
